DETAILED ACTION

Specification

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claim 33 is rejected under 35 U.S.C. 102(e) as being anticipated by Shpantzer et al. US publication no. 2002/0186435.

Regarding claims 16 and 33, Shpantzer discloses in Figures 2,3, 4 and 7 a method for transmitting optical polarization multiplex signals, the method comprising:

data modulator 340 for converting a first binary signal into a first optical signal (paragraph 0063);

data modulator 340 for converting a second binary signal into a second optical signal polarized orthogonally to the first optical signal (paragraph 0063);

combiner 320 for combining the orthogonally polarized optical signals into a polarization multiplex signal;

transmitting the polarization multiplex signal over fiber 245;

a splitter 710 for dividing the polarization multiplex signal at the receiving end into two orthogonally polarized signal parts;

optical phase detector for converting each polarized signal part in a linear manner into a complex signal (paragraph 0125);

feeding the complex signals to a multidimensional filter whose coefficients are controlled in such a way that signals which have been reconstructed independently of the polarization of the received polarization multiplex signal and which correspond to the optical signals are fed out at the filter outputs, and that the reconstructed signals are demodulated and converted into binary signals at the receiving end (paragraph 0125).

3. Claims 16-24 and 26-32 are allowed.

Response to Arguments

4. Applicant's arguments filed on 01/17/2008 have been fully considered but they are not persuasive.

A) Rejection claim 33 is rejected under 35 U.S.C. 102(e) as being anticipated by Shpantzer et al. US publication no. 2002/0186435.

Applicant argues that Examiner admits that Shpantzer fails to disclose a data signal is converted by a serial to parallel conversion into a multiplicity of binary signals,

the data signal having a higher rate than the multiplicity of binary signals. However, the limitations above is not in claim 33.

Conclusion

5. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
